Dear Recruiter,

I went through the job description and about your company. I would love to be part of your team.

I am a father to **two doting daughters**, **storyteller** and a **Javascript enthusiast**. I am currently spearheading the role of a **Staff software Engineer** at a Cyber Insurance company, **Cowbell Cyber Pvt Ltd**. In my **14 years** of experience in mobile and web development, I have always worked in startups to build meaningful software products. As a full-stack developer, I have worn multiple hats to get things done, but **react, javascript**, and visualization excite me the most.

I have **B1/B2 visa approved for the USA**.

Following are achievements or accomplishments, which is worth mentioning:-

1. Built a high performing team here at Cowbell Cyber. It includes actively hiring and mentoring team members.

2. Optimized the performance of our customer facing web app. This involved the following steps:-

a. upgraded from hosting website from s3 to cloudflare CDN. This helped us in leveraging the benefit of http2 like server push, request multiplexing, and reduced header size.

b. iteratively improving the core web vitals score. there by leading to an improved SEO ranking.

3. looked into the security aspect of the e-commerce application. Implemented **CSP**, **Snyk scans**.

4. Created **SSE**(Server sent event) server in spring boot to build event driven real time data fetch for dashboards.

5. Led efforts to enhance unit test coverage, using **Codecov** and **SonarQube** to establish quality gates and boost code coverage.

6. Utilised **Sentry** and **New Relic** to maintain industry- standard core web vitals, significantly improving **SEO** performance.

7. Implemented **Oauth2** to generate tokens for clients(Auth code, Implicit, and client credential grant types). So that third-party apps can integrate with us and fetch data on behalf of clients.

8. **SAML** integration of our collaboration tool, so that our clients can

single sign-on into our product(collaboration tool).

9. Received Amazon voucher worth 10k, twice a year for writing the maximum amount of unit tests. This has helped us in writing stable and testable code. Implemented Sonarqube and codecove for code coverage.

How will I add value to your org:-
1. I have B1/B2 call visa approved for USA. So I can easily commute to USA for any business needs.
2. I have a good command on the following tech stack:-
Frontend: **react, next.js, react-native, rx-js, typescript, javascript, angularjs, socket.io, d3.js, danger.js, redux, tanstack react-query, redux toolkit, zustand, tailwind css, material ui, apollo client, graphQL, SEO.**
Backend: **nodejs, express, nestjs, prisma.io, Java, Spring Boot, Gradle, ElasticSearch**.
Monitoring & Observability: **Cloud Watch, New Relic, ELK, Grafana, sentry.io, splunk, quantum metrics**
Cloud and DevOps Proficiency: **Docker, AWS, PM2, nginx, terraform, kafka, redis message queue, K8s, AgroCD, Komodor, Vercel, cloudflare, akamai, github actions, jenkins**.
Database: knowledge of **relational** & **NoSQL**. **PostgreSQL**, **mongodb**, **redis.**

3. Building a high performance team by hiring new candidates and constantly mentoring the junior folks.
4. I can be a great help to the company in terms of front-end technology. I have done a humongous amount of work that is frontend intensive. In terms of the front-end, you can rely 101% on me.

I have also attached my resume for your reference.

Cheers!!
