Dear Recruiter,

I am a **Staff Software Engineer** at **Spotnana**, where I lead the development of web and mobile platforms in the business travel domain. I am also a father to two daughters, a storyteller, and a passionate JavaScript enthusiast. With over 15 years of experience across startups, I have focused on building meaningful, high-impact products. I particularly enjoy working with **React**, **JavaScript**, and **data visualization**. I also hold a valid **B1/B2 visa** for the United States.

Following are achievements or accomplishments, which is worth mentioning:-

1. Implemented role-based access control, improving flexibility in granting access to resources through custom roles and groups.
2. Built AI-based flight recommendations, thereby increasing revenue and improving conversion rates.
3. Optimized the performance of our customer-facing web application through the following initiatives:
 - a. Migrated hosting from S3 to Cloudflare CDN, enabling **HTTP/3** and leveraging **QUIC** over **UDP** for improved performance.
 - b. Iteratively improved **Core Web Vitals**, leading to better **SEO** rankings.
4. Leveraged AI tools to improve developer productivity and experience:
 - a. Integrated **Claude** with GitHub for AI-assisted code reviews.
 - b. Integrated **CodeRabbit AI** with GitHub for automated code reviews.
 - c. Used **Cursor** with **Claude Code** to accelerate development.
 - d. Automated developer workflows using **n8n**.
 - e. Used **NotebookLM**, **Napkin AI**, and **OpenClaw** for productivity and research.
5. Strengthened code quality using **SonarQube**, improving code coverage and maintainability..
6. Utilised **Sentry** and **New Relic** to maintain industry- standard core web vitals, significantly improving **SEO** performance.

How will I add value to your org:-

1. I have **B1/B2** visa approved for **USA**. So I can easily commute to USA for any business needs.
2. I have a good command on the following tech stack:-
Frontend: **react**, **next.js**, **react-native**, **rx-js**, **typescript**, **javascript**, **angularjs**, **socket.io**, **d3.js**, **danger.js**, **redux**, **tanstack react-query**, **redux**

toolkit, zustand, tailwind css, material ui, apollo client, graphql, SEO.

Backend: **nodejs, express, nestjs, prisma.io, Java, Spring Boot, Gradle, ElasticSearch.**

Monitoring & Observability: **Cloud Watch, New Relic, ELK, Grafana, sentry.io, splunk, quantum metrics**

Cloud and DevOps Proficiency: **Docker, AWS, PM2, nginx, terraform, kafka, redis message queue, K8s, AgroCD, Komodor, Vercel, cloudflare, akamai, github actions, jenkins.**

Database: knowledge of **relational & NoSQL. PostgreSQL, mongodb, redis.**

AI tools: **Cursor, Claude, Claude Code, Codex, Code Rabbit AI, n8n, OpenClaw, Napkin AI, Notebook LLM**

3. Building a high performance team by hiring new candidates and constantly mentoring them.

Looking forward to discuss further.

Cheers!!
